

MJ-12 Turntable Sheet

The original turntable sheet, MJ-12 is designed to trace the groove on the vinyl absolutely. The surface of MJ-12 is re-curved 1.0 degree which makes the record surface closely fit to the MJ-12 by using a stabiliser, recommended to be at least 300g.

The body is made by A5052 Aluminium which has excellent acoustic property and dimensional accuracy, cut by NC machining.

By special Alumite treatment, the tiny variations on the surface are attenuated and it maintains long durability and beauty.

Tuning holes arranged in a spiral pattern for effective vibration attenuation

Outer diameter is 294mm. The thickest part is 5mm. Weight of MJ-12 is 670 g.

To extract the highest performance of MJ-12, please first take off the mat that is supplied with your turntable.

Please use a turntable with adequate torque for the weight of MJ-12 and the stabiliser that you use..

MJ-12 gives a whole new expressive power to your turntable and you hear the music in your favourite analogue records more clearly.
