

## STB-MS, STB-HW Heavyweight Vinyl Stabilisers

STB-MS (440g)

STB-HW (790g)

STB-MS is the original vinyl stabilizer produced with innovation concepts. It is composed of detachable 10 parts and its weight is changeable by the number of the weights for your best timbre tuning. And, the optional carbon weight, STB-CM, can be equipped according to you preference. Furthermore, it can be used for EPs by flipping it upside down. It is 35mm high.

The STB-HW is the heavy-weight model which is the heaviest vinyl stabilizer on the market when it is full-weighted condition. It enhances the tracing ability of the groove to the maximum. It is 55mm high.

The 10 component parts of STB-MS can be assemble/disassemble by users

The 10 component parts of STB-HW can be assemble/disassemble by users

### The hybrid material of aluminium, brass and silver carbon

The combination of the hybrid material of aluminium, brass and silver carbon optimizes the vibration mode. It attenuates vibrations by platter rotation and enhances the trace of the grooves. Furthermore, the silver carbon weight spacer damps mutual interference of vibration. The STB-MS/HW extracts information on the vinyl maximally.

### Exchange for optional carbon weight STB-CM (only for STB-MS)

With the lighter carbon pieces this conforms to record payers with a floating suspension such as Linn LP12

### Special precautions for using STB-MS and STB-HW

When you set the MJ-12 and Stabiliser without the original turntable mat, the height from the platter is about 40mm for STB-MS and about 60mm for STB-HW.

Operation of these products can not be guaranteed with all turntables or for all EPs, The weight of MJ-12 and STB-HW combined is 1.4Kg.

The spindle diameter of  $\phi$  7.23 cannot be guaranteed to work with all turntables,
